Avio Smart Market Stack strengthens diagnostics & healthcare vertical in discussion with Medici Institute

11 June 2026 | News

Discussions focused on collaborative research, clinical validation studies, real-world evidence generation

As part of its strategy to build a scalable Diagnostics & Healthcare business, Avio Smart Market Stack (formerly Bartronics India) has initiated strategic discussions with Medici Institute of Medical Sciences (MIMS), Hyderabad, to explore

opportunities for research collaboration, clinical validation, and adoption of advanced molecular diagnostic technologies.

As part of the interaction, Huwel Lifesciences, ASMS' strategic molecular diagnostics partner, showcased its portfolio of indigenous diagnostic technologies and ongoing innovations in molecular diagnostics.

The discussions brought together leadership teams, clinicians, researchers, and academic experts to examine how innovative molecular diagnostic solutions can strengthen disease detection, improve clinical decision-making, and enhance healthcare outcomes across India.

During the discussions, Huwel Lifesciences showcased its comprehensive portfolio of indigenous molecular diagnostic technologies, including solutions for tuberculosis, multidrug-resistant tuberculosis (MDR-TB), sepsis, HPV screening, hepatitis, antimicrobial resistance (AMR) detection, respiratory diseases, and environmental surveillance.

The discussions focused on collaborative research, clinical validation studies, real-world evidence generation, and opportunities for adoption and deployment of Huwel's diagnostic technologies within Medici's healthcare ecosystem. The organisations also explored the possibility of pilot programmes and product evaluations across selected departments to assess their impact on routine diagnostic workflows.

As part of its Diagnostics & Healthcare growth strategy, ASMS is actively building market access channels for advanced diagnostic technologies through partnerships with healthcare institutions, government programs, research organisations, and industry stakeholders. Through its partnership with Huwel Lifesciences, the company is working to accelerate validation, adoption, procurement, and large-scale deployment of indigenous diagnostic solutions across India and international markets.
