RPG Life Sciences partners with Archerchem Healthcare to launch Naprosyn ES

13 July 2026 | News

An anti-inflammatory solution along with gastro-protection

Mumbai-based RPG Life Sciences has partnered with Archerchem Healthcare to launch Naproxen and Esomeprazole combination for the first time in India by strengthening the existing business relationship with Archerchem.

Naprosyn ES is a combination of Naproxen and Esomeprazole, designed to deliver effective anti-inflammatory solution along with gastro-protection. The combination has been co-developed by Archerchem Healthcare along with its development partner. RPG LS will exclusively market and distribute Naprosyn ES across the country and Mumbai-based Archerchem as the exclusive supplier.

The product addresses a significant unmet need in patients requiring long-term Nonsteroidal Anti-Inflammatory Drug (NSAID) therapy, particularly those at risk of gastrointestinal complications. The differentiated formulation is expected to improve patient compliance and enable safer long-term pain management, especially among elderly and gastro-sensitive populations.

RPG Life Sciences will leverage the strong legacy and brand recall of Naprosyn brand and lean on its robust reach to a wide spectrum of doctors, including super-specialists, along with pan-India distribution network to drive distribution. The launch aligns with RPG Life Sciences' continued focus on building a differentiated portfolio in chronic therapy segments. Naprosyn ES is available pan-India.
