Docstribе raises strategic funding to accelerate market expansion across US and GCC

13 July 2026 | News

An AI-powered precision care coordination and revenue cycle platform

Gurugram-based startup Docstribе, a leading AI-powered digital patient care journey and precision care coordination platform, has announced the successful closing of a strategic funding round led by ABGD Ventures.

This investment will fuel Docstribе's market expansion strategy, with a primary focus on strengthening its presence across the United States (US) and the United Arab Emirates (UAE), two of the world's most progressive and rapidly evolving healthcare markets.

This funding round represents a significant vote of confidence in Docstribе's vision to redefine how healthcare providers deliver care, through technology, precision, and a deep commitment to patient outcomes and enhancing business performance.

The United States and the United Arab Emirates represent strategic priorities for Docstribе's next phase of growth. Both markets are characterised by a strong appetite for healthcare innovation and AI adoption, significant investment in digital health infrastructure, and a growing emphasis on value-based care models.

Docstribе's expansion into these markets will be supported by targeted go-to-market strategies, strategic alliances with leading healthcare providers, and a dedicated focus on demonstrating measurable clinical and financial impact for partner organisations.
