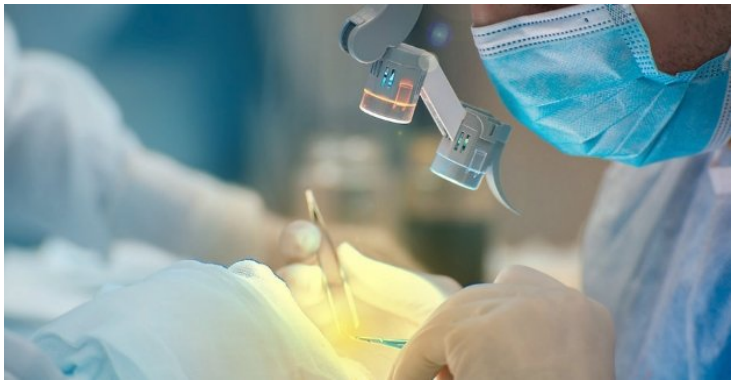
Stryker advances clinical excellence in fluorescence-guided surgery in gynaecology in India

02 September 2026 | News

Fluorescence-guided surgery is emerging as an important advancement in gynaecology



Stryker, a global leader in medical technologies, has announced a strategic partnership with the Indian Association of Gynaecological Endoscopists (IAGE) to strengthen surgeon education and capabilities in fluorescence-guided surgery (FGS) in gynaecology.

This strategic partnership was signed during the Pelvic Organ Prolapse Conference 2026 in Chennai, in the presence of 350 gynaecological surgeons and healthcare professionals from across India.

Fluorescence-guided surgery (FGS) is emerging as an important advancement in gynaecology, enabling enhanced intraoperative visualisation that can support surgical precision, informed clinical decision-making and improved patient care.

Through this partnership, Stryker and IAGE aim to expand access to high-quality educational opportunities in FGS. Over the next two years, the collaboration will deliver pan-India clinical educational initiatives. Participating surgeons will also gain exposure to leading Indian and international experts, fostering knowledge exchange and encouraging the adoption of global best practices in gynaecological surgery.
