Medulance raises Rs 24 Cr to scale tech-enabled emergency healthcare network across India

04 September 2026 | News

To deploy the fresh capital towards expanding its national footprint

Medulance, a Delhi-based technology-enabled emergency healthcare and pre-hospital response startup, has raised Rs 24 crore in its Series A-2 funding round from Auxano, Alkemi, Equentis, and other angel investors.

The company will deploy the fresh capital towards expanding its emergency response infrastructure across India, strengthening its enterprise and hospital businesses, and further investing in its proprietary technology platform and connected ambulance capabilities.

Medulance currently operates through a network of 15,000+ ambulances across 500+ cities, covering more than 8 million lives and handling approximately 5,000 calls per day across its emergency response ecosystem.

The company has also been investing in connected emergency response infrastructure. It developed India's first 5G-enabled smart ambulances designed to transmit real-time telemetry to hospital dashboards, support CCTV-enabled visual triage and enable live clinical oversight. These capabilities are intended to help hospitals and medical teams gain visibility into a patient's condition even before the ambulance reaches the hospital.

The company has now raised \$5 million across two funding rounds. With the latest round, the company plans to expand its presence across existing markets, enter additional cities and further strengthen its technology-led emergency healthcare infrastructure.
