Sanofi signs LoI with Tricog Health to support AI-enabled cardiac diagnostics solutions

07 September 2026 | News

Sanofi will provide mentorship, market access support, and potential financial investment to Tricog

Sanofi Healthcare India has signed a Letter of Intent (LoI) with Bengaluru-based Tricog Health, a Bharat Innovates startup, taking a concrete step towards enabling India's startup and entrepreneurship ecosystem.

Sanofi came in touch with Tricog Health at the Bharat Innovates 2026 summit where the Ministry of Education, Government of India showcased 120 of India's best deep tech startups at a global stage in France.

Under this partnership, Sanofi will provide mentorship, market access support, and potential financial investment to Tricog, a health-tech startup that supplies virtual cardiac diagnostic tools and services that are built by combining artificial intelligence and medical expertise.

The three-year collaboration reflects a shared commitment to nurturing homegrown innovation and building a robust entrepreneurial ecosystem that can drive meaningful impact in healthcare and beyond. This partnership comes against the backdrop of the India-France Year of Innovation 2026 — a landmark bilateral initiative placing innovation at the core of the India-France relationship.

Sanofi also plans to engage with other healthcare innovators among the deep-tech ventures identified under the Bharat Innovates initiative, including those emerging from IITs and other higher education institutions, incubators, and innovation hubs across the country. Sanofi will be extending its support to more startups such as Ahammune Biosciences and the Translational Health Science and Technology Institute, which are addressing some of healthcare's most pressing challenges through cutting-edge research and technology.
