Organon announces grants to support women's health in Bihar and UP

16 September 2026 | News

Marking a significant milestone in local community efforts to strengthen women's health initiatives

Organon, a global healthcare company focused on women's health, has signed an agreement sealing a shared commitment with two 2026 Her Health Grant recipients in India: Population Services International India (PSI India) and Ipas Development Foundation (IDF).

The grants will support programmes addressing adolescent health and well-being in Bihar and expanding access to contraceptive choice through the private health sector in Uttar Pradesh.

The Organon Her Health Grants is a global programme designed to support organisations that expand access, equity, and informed choice for women and girls, marking a significant milestone in local community efforts to strengthen women's health initiatives.

PSI India will implement the AWESOMM_HER programme in Bihar across five districts, Purnia, Katihar, Kishanganj, Araria and Gaya, integrating nutritional support, menstrual health and hygiene education, and mental health resilience counselling into the daily lives of adolescent girls.

On the other hand, Ipas Development Foundation will work across five districts of Uttar Pradesh to strengthen the private health sector's capacity to offer women a fuller range of contraceptive choices, with a focus on long-acting reversible contraceptive (LARC) methods.

Speaking on the signing of the Her Health Grants agreement, Andreas Daugaard Jørgensen, Managing Director of Organon Asia Pacific, said: "India is home to the largest adolescent populations in the world and some of the most significant unmet needs in women's health, so this is an important focus for Organon. These two programmes tackle different points in a woman's life, from the health information a teenager needs to the contraceptive choices a woman makes as an adult. Both programs can have significant impact for education, health and opportunity for the women.
