Mapmygenome acquires dnaPower to expand presence in North America

21 October 2026 | News

To accelerate North American expansion in DNA, microbiome, longevity and precision health testing

Hyderabad-based Mapmygenome has announced the completion of its acquisition of Vancouver-based dnaPower Inc., a pioneer in personal genomics. The strategic transaction expands Mapmygenome's North American footprint and establishes a market-leading platform in DNA testing, gut microbiome health, longevity, and AI-driven multi-omics testing.

By uniting dnaPower with Mapmygenome's global scale and premier CAP-accredited clinical laboratory capabilities, including Vancouver-based Microbiome Insights, acquired in 2025, the acquisition creates a centralised platform for DNA, microbiome, pharmacogenetic, and longevity testing dedicated to proactive, preventive healthcare across Canada and the US.

"Acquiring dnaPower is a pivotal step in scaling our North American operations," said *Anu Acharya, Founder and CEO of Mapmygenome.* "Pairing dnaPower's commercial trajectory with our CAP-accredited clinical laboratories and AI capabilities positions us to define the next frontier in microbiome, longevity, and precision health testing."

"Joining Mapmygenome unlocks an extraordinary growth chapter for dnaPower," said Dr Lois Nahirney, Founder and CEO of dnaPower. "Backing from a global leader with elite laboratory infrastructure gives us the foundation to scale rapidly across North America, delivering advanced, high-quality products directly to our clients."
