A new sample prep guide from Phenomenex

Phenomenex has announced the publication of a new sample preparation guide and selection tool to help scientists produce cleaner samples for more efficient chromatographic analysis. It is available online while a print version will be provided on request. The 50-page guide includes useful tools and resources to help select the most appropriate technique for any sample type. It also provides specific product recommendations, general methods and protocols for easy method development.

"Phenomenex is rapidly expanding our sample preparation portfolio with new technologies, format options and improvements that makes it easier to effectively prepare samples prior to chromatographic analysis," commented Mr Allen Misa, brand manager for Phenomenex. "We also have an excellent dedicated sample preparation support team to assist users with specific challenges and questions."
