Zydus to organize a Symposium on drug discovery

Every two years, Zydus Research Center, the research arm of Zydus Cadila, holds an international symposium and attracts an active participation from the scientific community worldwide. The key focus for this symposium is discovering molecules: small molecules and biologics approaches.

This year's Ramanbhai Foundation 7th International Symposium (RBF) will focus on Advances in New Drug Discovery and Development through state-of-the-art lectures, cutting-edge poster presentations, panel discussions, and informal scientific networking.

The RBF Symposium aims to create a platform for knowledge-sharing where researchers, scientists, academicians, and the industry can converge, discuss and share new trends in Drug Discovery and Development.

The symposium is to be organised from Feb 2-4, 2015, at Zydus Research Center, Ahmedabad, India and will be attended by world leading scientists from academia and industry.
