13: Bioscreen

Introducing a wide range of innovative products in the market. Bioscreen recorded 11.8 percent growth in 2013-14. With a pan India presence of eight branches across India, Bioscreen is a leader in offering automated liquid handling solutions for the lifescience and drug discovery markets. Through its various initiatives, Bioscreen is steadily becoming stronger in the biotech market.

The firm established itself in the market in partnership with Tecan, through the Tecan automated liquid handling and microplate multimode detection system that served various applications. Riding high on the innovation wave, the firm introduced a wide range of novel products that catered to the needs of all major disciplines of lifesciences, in the last fiscal year. The firm's LGC K Bioscience KASPA Genotyping Technology helped the firm tap the emerging clinical and agro market.

Other examples of product augmentation were introduction of microflow imaging for protein aggregation, automated Weston analyzers for biomarker validation, high throughput colony picking system used at molecular biology labs and automated evaporation system for controlled crystallization applications.

The firm's new bio banking automated storage system that provides temperature regulated storage for biological samples attracted global pharma players and many research laboratories. Bioscreen's major collaborations with the National Center for Biological Science, Bangalore and Indian Institute of Science and Educational research, Chandigarh played an instrumental role in designing and developing innovative products to leverage the market.
