Cole-Parmer expands its Digi-Sense product range

Cole-Parmer has expanded its Digi-Sense line of precision measurement instruments.

Digi-Sense has introduced several new instruments for convenient temperature measurement, equipment testing, and inspection. The "Be Sense-ible" line from Cole-Parmer contains a full range of environmental and temperature instruments that includes thermocouple meters, thermistor meters, RTD meters and infrared thermometers-many with NIST-traceable calibration already completed and ready to use upon arrival.

The new items include, Digi-Sense Precalibrated Humidity and Temperature Indicator monitors humidity levels and displays temperature and time as well. The Indicator contains a unique environmental comfort indicator; Digi-Sense Precalibrated Pocket Thermometers in large head, pen style, and folding probe types take fast and accurate temperature measurements anywhere; Digi-Sense Precalibrated Pocket-Size Moisture Meter measures the moisture level in wood products and hardened materials with one-handed operation; Digi-Sense Precalibrated Digital Contact/Photo Tachometer ensures equipment is in optimal operating condition, eliminating costly repairs; and Digi-Sense Borescope and Video Borescope are ideal for inspecting ductwork, wiring, piping, vehicles, and other hard-to-reach areas.
