Biomedical Systems announces affiliation with the ePRO Consortium

Biomedical Systems has announced its affiliation with the Electronic Patient-Reported Outcome (ePRO) Consortium, a program run by the Critical Path Institute (C-Path).

The company will collaborate with the group's 10 other members to advance the quality, practicality and acceptance of electronic data capture (EDC) methods used in clinical trials for PRO endpoint assessment.

"Clinical outcome assessments are becoming more important in clinical trials to determine whether a drug has demonstrated a treatment benefit. By joining the ePRO Consortium, Biomedical Systems will contribute in a non-competitive and neutral environment to improve the quality of data collection methods for clinical outcomes assessments," said Mr Timothy Barrett, chief operating officer at Biomedical Systems.

With this new partnership, Biomedical Systems reinforces its dedication to the advancement of ePRO to increase the quality of data for electronic data capture. Its second generation ePRO platform supports home, site and Web-based systems to collect timely, high-quality data for clinical trials worldwide.

C-Path is a nonprofit, public-private partnership with the United States Food and Drug Administration (USFDA) and is dedicated to bringing scientists from the FDA, industry and academia together to improve the drug development and regulatory process for medical products.
