Theorem opens a new clinical supplies facility

Theorem Clinical Research will open a new, state-of-the-art clinical supplies facility in Frankfurt, Germany, in June.

The current good manufacturing practice (cGMP) compliant facility will triple Theorem's current clinical supplies capacity, with space for 2,700 square meters of ambient (15 to 25°C) and refrigerated (2 to 8°C) space. The opening also positions Theorem's clinical supplies hub near the Frankfurt Airport, a major transportation hub.

"We are excited to have the additional manufacturing and warehousing space and, more importantly, an infrastructure to deliver the flexibility our clients rely on," said Mr John Potthoff, president and CEO, Theorem. He added, "The new facility will enhance speed and scalability while preserving the versatility of our supply solutions."

The launch of the new facility will strengthen current practices such as its 24/7/365 storage, continuous monitoring and backup and provides space for future service expansion.
