Transasia introduces new product

Transasia Bio-Medicals, an in-vitro diagnostic company has announced the launch of its latest semi-automated coagulation analyzers, the ERBA ECL 105 and ECL 412, equipped to perform the D-dimer assay.

The ERBA D-dimer reagents are available in a small pack size of 50 tests only, with no reagent reconstitution. It is ready to use with a stability of four weeks.

The affordability and easy availability of the D-dimer assay, ensures that every laboratory can perform this test, on the ECL 105 or ECL 412 semi-automated, coagulation platform.
