Eppendorf India launches new Eppendorf Tubes 5.0 mL with screw cap

This tube will complement the application spectrum of sample processing in the medium volume range: in addition to sample processing the 5.0 mL screw cap tube is ideally suited for secure transport, long term storage at temperatures as low as -86 °C as well as sample incubation at up to 100 °C.

In addition to a secure seal, the grooved and multi-surface side contours of the newly designed screw cap ensure a slip-free grip.

To accommodate the demands of individual laboratory protocols, the Eppendorf Tubes 5.0 mL with screw cap are available in the certified purity grades "Eppendorf Quality", "PCR clean" and "Sterile".
