Transasia Bio-Medicals Ltd conducts hands on training on various biochemistry instruments

As a first step in the direction to affirm that the consumers have a hands on with applications and operations to provide precise result, Transasia Bio-Medicals Ltd initiated a 'Biochemistry Medical Technologists Training Programme' in different cities across India like Mumbai, Baadi to name a few. The training was attended by technologists from laboratories and hospitals.

The programme was organised with an objective to introduce Good Laboratory Practices (GLP). The technologist were offered with training on automation and the entire range of biochemistry instruments. The expert team of product managers and scientific personnel from Transasia conducted technical and hands on training on various biochemistry instruments like EM 100, EM 200 and Chem Touch.

During the training, two levels of quality controls ERBANORM and ERBAPATH were run on EM 100 for three different chemistries namely Glucose (End point), SGOT/PT (Kinetic) and Creatinine (Tow point kinecti). The technologists were happy with the result and its precision boosted their confidence. For further reference, the participants were handed a training kit comprising of informative material.
