Omnicell announces launch of XT Cabinets

02 May 2017 | News

The company recently announced that customers using its AcuDose-Rx® Automated Dispensing Cabinets are now able to upgrade to the XT Series, Omnicell's most innovative cabinet, while continuing to use their installed software.

Omnicell, Inc. is a leading provider of medication and supply management solutions and adherence tools for healthcare systems and pharmacies. The company recently announced that customers using its AcuDose-Rx® Automated Dispensing Cabinets are now able to upgrade to the XT Series, Omnicell's most innovative cabinet, while continuing to use their installed software. The company's engineering, product development and validation teams were able to successfully complete product integration earlier than expected. As a result, AcuDose-Rx customers are now experiencing the benefits of increased capacity, security, and speed offered by the XT cabinet.

For the past two and a half decades, Omnicell has partnered with hospitals, long-term care centers, and others in the healthcare continuum to best understand their needs and challenges in managing medications—a critical aspect of patient care. The XT Automated Dispensing Cabinet is designed to improve the way medications are managed. In addition, the new XT technology is designed to enable future innovations.

Customers using AcuDose-Rx cabinets can now add XT cabinets that operate with AcuDose-Rx software. This means the user interface will be familiar to end users, making it easy to have a combination of AcuDose-Rx and XT cabinets in the same facility. These customers can now benefit from XT cabinet features such as Guiding Lights, which guide the user to the precise locations of medications within the cabinet, and smart drawer designs with metal locking lids that add capacity and security. The XT cabinets can be added onto the customer's existing cabinet network and share the same formulary, EHR interfaces, and overall server structure.
