

Pitt Medicine collaborates with French research institutes

14 July 2017 | News

The agreement will enable researchers of all four institutions to cooperate on fundamental research, development of novel therapeutics, and clinical trials.

The University of Pittsburgh School of Medicine has entered into an agreement with three world-renowned French research institutions, the University Pierre et Marie Curie of the Sorbonne Universités in Paris, the Institut National de la Santé et de la Recherche Médicale (Inserm); and the Centre National de la Recherche Scientifique (CNRS), to focus on collaborative research and education in the fields of medicine and biomedical sciences.

The agreement will enable researchers of all four institutions to cooperate on fundamental research, development of novel therapeutics, and clinical trials, with an initial focus on ophthalmology, vision and neuroscience. Along with joint research, the agreement also emphasizes exchange of academic personnel, joint academic conferences, and exchange of scientific, educational and scholarly materials.

Inserm, the French National Institute of Health and Medical Research, is the only public research institution solely focused on human health and medical research in France and a leading medical research agency worldwide; and CNRS, the French National Center for Scientific Research is the largest governmental research organization in France and the largest fundamental science agency in Europe.
