

## Department of Biotechnology conducts stakeholder meet on NCS-TCP

15 November 2017 | News

### Stakeholders discuss ways to realize full potential of Certification System

In order to create awareness among all the Stakeholders particularly key Officials from Centre and State Government's Agriculture and Horticulture Departments, Department of Biotechnology recently conducted the Stakeholder Meet on "National Certification System for Tissue Culture Raised Plants (NCS-TCP)"

Tissue Culture Industries, Farmers and Mission Directors of State Horticulture Mission/ Senior Officials of Horticulture Department in the State's dealing with tissue culture plants/quality planting material interacted to identify the way forward to realize the full potential of this certification system which is unique, dynamic and comprehensive in nature.

Government of India established the "National Certification System for Tissue Culture Raised Plants (NCS-TCP)" authorizing Department of Biotechnology, Ministry of Science & Technology as the Certification Agency vide the Gazette Notification dated 10<sup>th</sup> March 2006 under the "Seeds Act, 1966" for ensuring production and distribution of quality tissue culture planting materials.

The purpose of NCS-TCP is to ensure production and distribution of quality tissue culture planting materials. NCS-TCP is a unique quality management system, first of its kind in the world which ensures recognition of Tissue Culture Production Facility for the production of quality planting material and certification of end products.

Currently, around 80 Companies are recognized. Two Referral Centres and five Test Laboratories are accredited under this system. The recognized companies are eligible for getting their planting material certified from the Accredited Test Laboratories. So far, more than 275 million Tissue Culture plants have been certified through this system.

In his keynote address, S. K. Pattanayak, Secretary, Department of Agriculture, Cooperation and Farmers Welfare, Ministry of Agriculture Cooperation and Farmers Welfare stressed on a system in which all tissue culture material would be procured from accredited laboratories and the need for participation of states in such a system.

"India is doing very well in tissue culture research and that scientific institutions of international repute is now open for Indian scientists for new research. He underlined the need for fund for popularization of tissue culture from the Ministry of

Agriculture”, he added.

Professor K VijayRaghavan, Secretary Department of Biotechnology highlighted the strong foundation of partnership between farmers and scientific community and added the need to have a well-articulated project for new improved varieties for horticulture.

“Since India is the only country to develop this certification system, this progress can be used for building capacities in the neighbouring countries and that it would be an important step in science diplomacy”, he added.

Dr Renu Swarup, Senior Advisor, DBT highlighted the structure and current status of NCS-TCP and the impact it has made on production of quality materials in different states.

She stressed on the need for popularising tissue culture plants across India by 2020 and enlisting the participation of the states in the process.
