MSN Labs collaborates with BITS Pilani to elevate educational opportunities for young workforce

18 June 2024 | News

Need to nurture professional development through enhanced learning experiences

Hyderabad-based MSN Laboratories has signed a Memorandum of Understanding (MoU) with Birla Institute of Technology and Science (BITS) Pilani's Work Integrated Learning Programmes (WILP) division, in an endeavour to elevate educational opportunities for their Self-Directed Teams (SDTs) within the formulation units.

This collaboration aims to help their professionals in keeping pace with the rapid global pharmaceutical industry evolution and in preparing them for their designated roles, which in turn will aid MSN Labs in addressing the ever-changing business requirements.

As part of the collaboration, the professionals will also undergo training to operate machinery and fulfil roles within different production departments, by working closely with their senior staff members.

MSN Laboratories operates 25 world-class, state-of-the-art manufacturing units across Hyderabad and the USA. Recently, they onboarded young budding professionals who have completed their 10+2 higher school programme.

To ensure seamless integration and equip them with the knowledge and skills necessary for driving sustainable progress in the pharmaceutical industry, MSN Laboratories has partnered with BITS Pilani. As of now, sixty team members from MSN Laboratories' formulation division have been enrolled in the B.Sc. Pharmaceutical Science programme offered by BITS Pilani WILP.
