City Imaging & Clinical Labs to expand services to 50 hospitals in North India by March 2027

14 October 2024 | News

Plans to offer hospital lab management services to over 50-bedded hospitals

Delhi-based City Imaging & Clinical Labs, one of India's premier diagnostic chains, is set to make a profound impact on hospital laboratory management by expanding its services across North India.

The company is currently associated with 10 hospitals, providing comprehensive lab management services, including 24/7 in-house phlebotomy and lab testing. Several of these labs are NABL accredited, ensuring the highest standards of care and diagnostics.

City Imaging & Clinical Labs has ambitious plans to grow its network, offering world-class laboratory services to hospitals with 50 or more beds. The goal is to extend its footprint across North India over the next five years, supported by cutting-edge technology, a dedicated corporate quality assurance (CQA) team, highly experienced Pathologists, and an advanced Laboratory Information Management System (LIMS).

"Our initiative will transform how hospital labs are managed in India. From existing numbers of Hospital Labs, we plan to offer the services to over 50 hospitals with 50 beds and above across north India by March 2027. In the next five years, we would take it to over 50 Hospitals. With our expertise, hospitals will be better equipped to deliver superior patient care and identify critical conditions before they become life-threatening," said Dr Aakaar Kapoor, CEO of City Imaging & Clinical Labs.

The expansion of these services will provide hospitals with the tools and expertise needed to detect and treat conditions before they escalate, thus improving patient outcomes and saving lives. Further, it would ensure that the clinical team can focus on clinical work without having to bother about diagnostic services.
