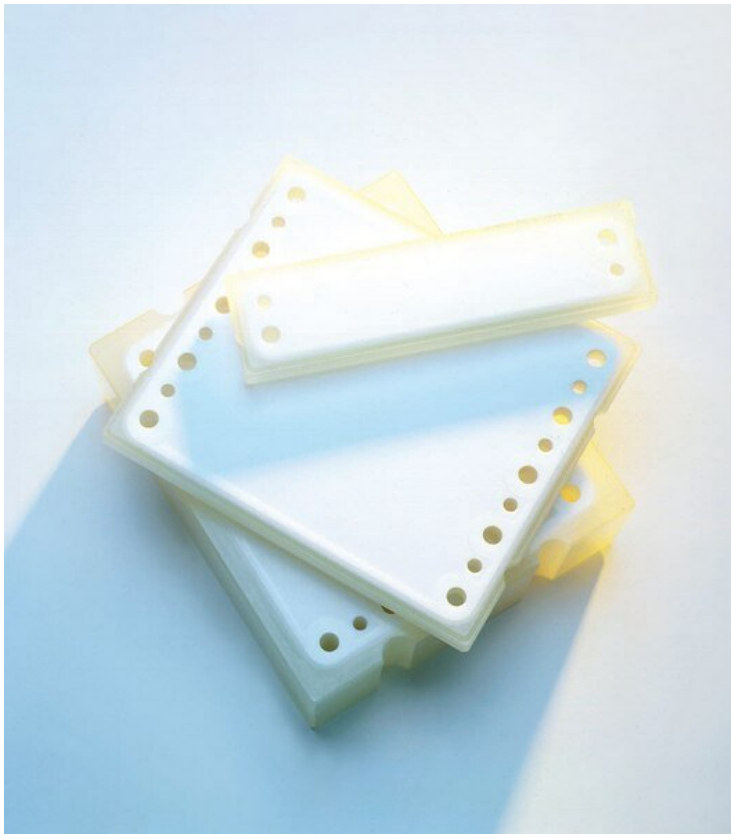
Merck expands Bengaluru facility to boost global supply of filtration devices

08 April 2026 | News

Investment expands Peenya site to produce filtration hardware and PelliconÂ® 2 ultrafiltration cassettes



Merck, a leading science and technology company, has announced the expansion of its manufacturing facility in Peenya, Bengaluru. The investment added new production lines for filtration hardware system, followed up by Pellicon® 2 Ultrafiltration Cassette in 2026.

“These products are essential to producing life-saving medicines and vaccines,” said Tony Qiu, Head of APAC Operations, Life Science Business of Merck**.** “By expanding manufacturing in India, the company is strengthening global supply chains while supporting local innovation and skills."

Merck’s Pellicon® 2 Ultrafiltration Cassette is a trusted solution for high-quality purification, supporting a wide range of applications in the pharma and life science industries.

The Peenya site has been a hub for global filtration hardware production since 2006, and began manufacturing consumable products, including Prefilter cartridge in 2022. This expansion further strengthens India’s position in Merck’s global network while aligning with the Indian government’s *“Make in India”* initiative.
