Galgotias University partners with Felix Hospital to advance clinical education and healthcare training

21 July 2026 | News

Collaboration will foster interdisciplinary learning, joint research, workshops, and continuing professional education

Galgotias University has signed a Memorandum of Understanding (MoU) with Felix Hospital, Greater Noida, to strengthen clinical education and skill development for students of the School of Allied Health Sciences (SAHS) and the School of Nursing.

Felix Hospital runs two NABH-accredited multispecialty hospitals in Greater Noida, with a combined capacity of 400 beds. Under the partnership, students will receive structured clinical exposure, compulsory internships, competency-based education, and hands-on training with advanced medical technologies, along with practical experience in NABH quality standards, patient-safety protocols, and professional healthcare practice.

The collaboration spans the full breadth of the University's healthcare programmes. At SAHS, students of Physiotherapy, Cardiovascular Therapy, Laboratory Sciences, Optometry, and Medical Radiology and Imaging Technology will gain clinical exposure in their respective specialties at a working multispecialty hospital, complementing the school's on-campus facilities such as electrotherapy labs and its outpatient department.

For the School of Nursing, the partnership strengthens the clinical rotations that are central to its B.Sc. Nursing programme, a four-year degree recognised by the Indian Nursing Council and the Uttar Pradesh State Medical Faculty. Actual clinical experience at Felix will build directly on the University's cutting-edge nursing simulation lab, where students first master clinical procedures and emergency response on advanced mannequins in a safe, controlled setting before applying those skills at the bedside with real patients.
