Sciex launches new solutions to help clinical labs move faster from sample to answer

28 July 2026 | News

To support the delivery of high-quality patient-critical results

Sciex, a Danaher company and leader in life science analytical technologies, has announced new solutions designed to help clinical laboratories move from sample to answer faster with greater confidence, productivity and control.

The ExionLC MD system and Sciex OS software for the clinical portfolio simplify complex workflows, automate routine processes, and support the delivery of high-quality patient-critical results.

Sciex OS software is an intuitive software platform built for maximum impact. Key features include- Enhanced lab productivity with integrated automation, Streamlined workflows for higher throughput, and Compliance-ready data management.

The ExionLC MD system delivers high-performance UHPLC separation with the robustness and reproducibility required for clinical workflows, empowering labs to generate consistent, high-quality data with confidence. Designed to work with the Citrine system and the Sciex 4500MD system, it offers a complete LC-MS/MS solution for clinical labs. Key features include Higher-throughput performance, Enhanced analytical sensitivity, Advanced workflow flexibility.
