Three medtech startups win global launchpad at HealthSprint 2026

28 August 2026 | News

HealthSprint provides a platform to connect Indian founders with Israel's healthcare ecosystem

Three South Indian medtech startups have emerged as winners of **HealthSprint 2026**, a joint initiative of the **Consulate General of Israel in Bengaluru and Bengaluru-based Techstartup Accelerator GINSERV**, aimed at helping Indian healthcare innovators strengthen their businesses, investability and expand into global markets.

The winners were announced after the shortlisted startups pitched their solutions to a panel of cohort guides, mentors and investors from India and Israel.

The three winners are:

- **BioCipher Labs, Bengaluru** - an AI-powered molecular diagnostics startup.
- **Prodancy, Bengaluru** – a medtech company that has developed an indigenous surgical helmet for joint replacement procedures, aimed at replacing imported consumables.
- **Mykare.ai, Kochi** – an AI-native patient management platform designed for clinics and smaller hospitals.

The winners will receive a **fully funded, one-week immersive programme in Israel**, giving them an opportunity to engage with the country's healthcare and innovation ecosystem and explore pathways to validate, scale and expand their businesses into global markets.

Speaking about the India-Israel collaboration, **Max Shmagin, Deputy Consul General, Consulate General of Israel for South India in Bengaluru**, said, "When Indians and Israelis cooperate in sectors such as healthcare, the value goes up. Israel has built a strong health-tech ecosystem, and bringing these capabilities together creates an opportunity to validate and scale solutions between our two countries."
